

# Are your policies connected to your organisation?

Compliance problems and security breaches often arise from a lack of knowledge and understanding of what is required and why.

A major issue is dissemination of policies across the organisation, and monitoring who has, or has not, read and agreed to your policies.

RuleSafe™ allows everyone to find the right policies and guidance for their role or activity. The result is a more effective, scalable, compliance and security strategy. And it frees up valuable time for you to spend on your most critical projects.

## How do you cope with the distraction of regulation?

In the UK there are 647 regulatory bodies

- employing 61,000 people
- costing £4 billion
- sending out 3 million forms a year
- carrying out 3 million inspections a year.

**RuleSafe cuts through this complexity and gets compliance under control**

RuleSafe is a comprehensive policy awareness software system that allows you to:

- incorporate your existing policies, or tailor the supplied policies to your needs
- create an intranet portal for all your compliance and security procedures and standards
- integrate your policies with your chosen risk assessment method
- perform gap analysis against your policies across the organisation, and get a consolidated scorecard
- measure how many people have read and accepted each policy
- demonstrate adherence to industry standards and best practice.

There are a variety of RuleSafe solutions to accelerate industry or subject specific compliance projects.

With the RuleSafe™ for Information Security solution, your organisation has a ready-to-use set of information security policies, aligned with industry best practices such as ISO 17799 and 27001 (BS7799-2).

For organisations adopting these standards, RuleSafe provides a core part of your Information Security Management System (ISMS).

- **Policy at the heart of your IS strategy**
- **Connect people and policies**
- **Align the organisation's objectives with external regulation and your internal policies**
- **Measure regulatory and policy adherence**
- **Reduce risk**

**The most advanced and flexible Policy Management solution available**

**RuleSafe saves time, improves effectiveness and unlocks value from your existing policies and standards.**
